

FUTURE PROGRAMME

The area under organic farming is increasing but the productivity as well as profitability is still less as compared to conventional farming. Following strategy would be adopted to accomplish the vision of organic farming.

- Utilize all combination of organic sources coupled with innovative ideas to improve crop productivity, quality and soil health.**
- Develop nutrient rich organic manure production technology.**
- Pest and diseases can be controlled by use of biological insecticide/fungicide, botanical extract as well as through adopting agronomic practices.**
- Foster linkages and collaborations with public and private, national and international organizations to develop organic farming.**
- Working as a facilitator to get organic certification for increase the area under organic farming as well selling of produce.**
- Improve knowledge of farmer about organic farming through demonstrations and conducting seminars and lectures and by publishing literatures.**
