Dr. Priya John
Training and Placement Officer
NMCA, NAU, Navsari

MESSAGE FROM TRAINING & PLACEMENT OFFICER

Science has always been the world's savior. It's an amazing fact that solving scientific theorems is more captivating than doing anything else and that it rejuvenates the brain. Studying agricultural sciences is wonderful because it feeds the world, fosters serenity via connection to nature, and is fascinating because it deals with plants and their environment. World-class agricultural degree programs covering small to large-scale facets of agricultural science are offered at N. M. College of Agriculture. This college's student body is engaged and focused, with a strong interest in both extracurricular activities and academics. Our college gives them a general overview of all the material they require.

N. M. College of Agriculture provides placement chances for those who have the desire and keen to work hard for them as well as those who may earn prospects through their will and talent. We are excited to introduce the **2023-24** batch to you. This group presents a classic example of a brain with skills; they have learned theory in the classroom and have derived practical knowledge and skills in both the lab and the field. They have outstanding interpersonal abilities, which promotes their trustworthiness in company.

I have wholehearted faith in this bunch of students studying agriculture and believe you will find them more ideal for career with your organization. The recruitment will additionally definitely enrich the company.
