

## OBJECTIVES

1. Identify the high yield paddy varieties suitable for the region.
2. Develop the improved agronomical practices for obtaining the high yield.
3. Identify the plant protection measures suitable for paddy.
4. Need for improvement in the paddy yield through integrated approach.
5. Development of high yielding varieties to suit the local conditions.
6. To improve the fertilizer use efficiency.
7. To explore the integrated pest management measures for major insect pest and disease in this area.
8. Develop production technology for hybrid varieties.
9. To evolve economical and effective disease & pest management technologies.
